

## Safe Passage standard and semi-custom Entry Door system makes the entire process easier for you:

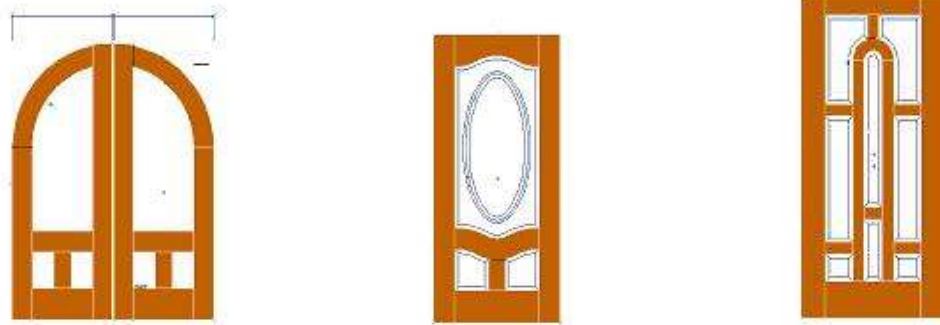

**Do you sell standard, or semi-custom, products?** Curb Appeal™ introduces a large quantity of (single and pair) customize-able door styles for the custom door producer. This new product enables rapid, easy order entry for production of custom door styles. Safe Passage has further enhanced the already easy to use NCAD Entry Door product, with a standard Entry Door system that streamlines the Order Entry, Design and Production processes. Simply select the door style, enter the size and the rest is fully automatic! Everything you need from order acknowledgement on through to CNC production.

In addition to fast and easy order entry, automated cut lists, glass sizes, order acknowledgement drawings, CNC instructions and much more are available at your fingertips! Most of the door styles can be used to create nearly an unlimited number of new door styles, simply by following a set of customization standards, including the following:

- Most of the single doors with straight top rails can also be used with segment tops, as the top rail is automatically converted to an arch when the opening is set to segment arches.
- Included with each door style is a dialog box for entering your special rail and stile dimensions.
- Lock rails, intermediate posts and Muntin bars can also all be changed per order.
- Each door includes an option for automatic doweling. This can be turned on or off as desired.
- Each door includes an option for automatic infills. This can be turned on or off as desired.
- Each door follows a common sense raised panel pattern, such as a standard raised panel(s) below the lock rail.
- Where logical, each door supports multiple glass patterns, such as two lites wide by four lites tall.
- Where there is a lock rail, these same glass patterns are also available above the lock rail.
- Custom top and lock rails with special arched radius or cyma arch requirements are also supported.
- Further customization is also available by selecting a standard door style and adding special intermediate rails or posts to it.

**Just a few of the door styles already available from Safe Passage in the new, Curb Appeal™ system:**

**Blank door styles, or styles with lock rails also support multiple lites in the upper portion of the door, such as two lites wide by four lites tall, or three lites wide by one lite tall, etc.**
